Topic: 9398 Message: 10657

Hello All,

Definitely a night for reception from the North. More accurately, it was a poor night for reception from any other direction. There were quite a lot of signals, but co-channel interference meant that few were decoded well enough for a positive identification.

Session Report for David Atkins, GM8XBZ

Topic: 9398 Message: 10666

Hello All,

I went outside to look at the Perseid shower. Visibility was so bad, I could barely see 500m across the water. Back indoors to the radio, which seemed to be having the same trouble.
Here are the logs over 1000km. Lots of garbled messages to sort through. Not enough to identify the culprits in most cases. These were the only clear ones.

Session Report for David Atkins, GM8XBZ

Hi David,
Aah, the Perseids!I remember seeing them during our honeymoon on the Island Djerba in the deep south of Tunisia, back in the seventies.
It was a crystal clear sky, the milky way band was so bright one could almost read a book by the light of it.
And then every few seconds the flashing trails of meteorites burning up. Stunning.
</end memory_lane_mode>
Regards - Dirk

Hello All,

I went outside to look at the Perseid shower. Visibility was so bad, I could barely see 500m across the water.

Hello David,

Considering last night static, your log is not bad at all.
Propagation is not very good yet as the sun is too restless and
solar flux is just a tad on the high side.

In due course it all will improve for sure!

73,
Roelof Bakker

Yahoo group: navtexdx (2015)
Date: 2015-08-12 10:53:20 UTC
From: david
Topic: 9398 Message: 10670

Hello All,

Thank you all for your encouragement. I think I have been luckier than listeners on mainland Europe, in suffering less static interference. Or perhaps the constant rain reduces it ;-(
Last night was a mixed one, with clear messages from VCO Sydney appearing as soon as La Garde closed. I was also fortunate that Malin Head was uncharacteristically late starting their 0400 transmission, enabling me to get nearly a full minute of EAL Las Palmas before their signal was swamped.

Hello to all,

I prepared the new loop with amplifier LZ1AQ , but
I'm picking up background noise very high and I'm looking for a solution
.
Meanwhile I connected the reliable Roelof miniwhip.

Topic: 9398 Message: 10673

Hello All,

Of course, I was too quick to suggest that the effects of static might be less for me because I was located further North. A terrible night, with screens full of semi-random characters. Even strong daytimers like Pinneberg at 700km were impossible to decipher for most of the night. And those that made it in to the log had errors in parts of their messages.
Towards the end of the night signal quality improved, especially from the South, and some reception was restored. Whether it was a sign of future improvement, or merely the eye of the storm, remains to be seen.

Hello David,

Static has been poor last night from a storm over Brittany.
It is still there and crossing the Channel, heading for the south of the UK. Later today it will move our way and there is a Code Yellow warning for this evening for this part of the country.

For the latests static information, I am using:

http://www.blitzortung.org/Webpages/index.php?lang=nl&page_0=10

It gives almost real time the location of thunderstorms.
I find the number of Strikes as displayed in the upper right corner of the screen most helpful. Last night it was about 40.000, which is quite bad. The highest figure I have seen so far was 60.000.
Together with the actual location of the storms, this is a good indication what to expect.

I never disconnect my mini-whip and loop when a thunderstorm is near. It has yet to happen that either antenna has been damaged.
(I can easily run the risk as I am building them myself!)
I do disconnect my HF doublet as this is a different story in regard to high voltage build-up due to nearby strikes.

73,
Roelof Bakker

Hello all,

Last night static has been terrific.
However propagation from Canada was excellent; I could visually decode the morse from NDB YHR-276, Chevery, CAN NL on a 200 kHz waterfall screen through the horizontal static generated bars!

It was a surprise to find a properly YaND flagged message from VON on both antennas! See below.
This is quite funny considering the ever lasting loop versus (mini-) whip debate!

NAVTEX 490 kHz log over 1000 km LZ1AQ loop:

20150812 2142 490 $01K TFA Grindavik,ISL 2045

Hi Roelof,
Here's what I catched on the whip last night at that time.Clearly Malta, with interference from VON??Then Portpatrick makes a late start, possibly with interference from Malta

Regards - Dirk

Subject: [navtexdx] NAVTEX from Zealand, HOL

Hello all,

Last night static has been terrific.
However propagation from Canada was excellent; I could visually decode the morse from NDB YHR-276, Chevery, CAN NL on a 200 kHz waterfall screen through the horizontal static generated bars!

It was a surprise to find a properly YaND flagged message from VON on both antennas! See below.
This is quite funny considering the ever lasting loop versus (mini-) whip debate!

NAVTEX 490 kHz log over 1000 km LZ1AQ loop:

20150812 2142 490 $01K TFA Grindavik,ISL 2045
20150812 2210 490 $03N IGS Piombino,ITA 1087
20150813 0156 490 $03L YQV Constanta,ROM 2027
20150813 0252 490 $03R SVL Limnos,GRC 2147
20150813 0340 490 $02W EAR Coruna,ESP 1283

NAVTEX 518 kHz log over 1000 km mini-whip:

20150812 2210 518 $01N LFO Orlandet,NOR 1367
20150812 2250 518 $03R ICH La Maddalena,SA,ITA 1228
20150812 2320 518 $03U IQM Mondolfo,ITA 1114
20150812 2352 518 $01X TFA Grindavik,ISL 2045

10677. Logs REU - L2C, BUENOS AIRES, ARG

Yahoo group: navtexdx (2015)
Date: 2015-08-13 19:10:20 UTC
From: Joachim Rabe
Topic: 10677 Message: 10677

Hi list,

last night I was lucky to receive a NAVTEX transmission from L2C, BUENOS AIRES, ARG on 8416,5 kHz for the first time.
The message is a bit scrambled but unambiguous

```

Hello Joachim,

Congratulations!
I've been trying to catch that station for years without any success.
I will give it a try tomorrow at that time.

Regards , Dirk

Hello Dirk,

Ouch. That picture really does look bad.
I also had a look at the Blitzordnung site that Roelof posted the link to. I have never seen such a concentration of strikes. I would be surprised if anyone could receive anything at all under that onslaught.
I hope you can get some useable conditions back, soon.

Best Wishes,
David

Thanks, Dirk.

I also chased this one for years and have no explanation, why it can be logged here all over sudden.

I must admit, I was inspired by the log of a fellow DXer from Germany, who didn’t quite realized, what he caught when he caught it a few days ago.

So I gave it a try, not anticipating too much.

And, guess what, it could also be logged last night at 21.00 UTC and 0030 UTC.

73s

Hi list,

last night I was lucky to receive a NAVTEX transmission from L2C, BUENOS AIRES, ARG on 8416,5 kHz for the first time.
The message is a bit scrambled but unambiguous

10682. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)

From: roelof@...
Topic: 70 Message: 10682

Hello all,

Early in the evening at hunderstorm passed overhead. This was a large complex and Blitzortnung.org noted 65.000 stikes. Even Niton at 347 km failed to produce proper decodes.

After 22.00 UTC the situation improved and the overnight log looks very normal! Later on the thunderstorm was in the null dirtection of the loop and this gave a bit btter decodes than on the mini-whip. However, total results on both antennas is very similar.

NAVTEX 490 kHz log over 1000 km LZ1AQ loop:

```
20150814 0040 490 $03E IQM Mondolfo,ITA 1114
20150814 0142 490 $01K TFA Grindavik,ISL 2045
20150814 0229 490 $03P SVK Kerkyra,GRC 1821
20150814 0340 490 $02W EAR Coruna,ESP 1283
```

NAVTEX 518 kHz log over 1000 km mini-whip:

```

From: david
Topic: 9398 Message: 10683

Hello All,

The Blitzordnung site showed the active storms to be well to the South of me, and the paths to my North turned out to be clear. The usual strong signals from the South made it through, but the East (and West) remained absent.
I liked the Blitzordnung site, although there does not seem to be any monitoring station off the European mainland. I note that the system is being re-designed. Perhaps, when the new system is functioning, we will be able to add to it.

Thanks, Dirk.

I also chased this one for years and have no explanation, why it can be logged here all over sudden.

I must admit, I was inspired by the log of a fellow DXer from Germany, who didn’t quite realized, what he caught when he caught it a few days ago.

So I gave it a try, not anticipating too much.

And, guess what, it could also be logged last night at 21.00 UTC and 0030 UTC.

Betreff: Re: [navtexdx] Logs REU - L2C, BUENOS AIRES, ARG

Hello Joachim,

Congratulations!

I've been trying to catch that station for years without any success.

I will give it a try tomorrow at that time.

Regards , Dirk

Hi list,

last night I was lucky to receive a NAVTEX transmission from L2C, BUENOS AIRES, ARG on 8416,5 kHz for the first time.
The message is a bit scrambled but unambiguous

10685. Re: [navtexdx] NAVTEX from L2C, BUENOS AIRES, ARG on 8416,5 kHz

Hi, Dirk,

glad you also managed to log it.

Isn’t that strange that we haven’t been able to log it before?

Hi, list,

L2C seems to become a regular guest here.

At 0300 UTC this morning, L2C was logged with a 40 mins. long message on 8416,5 kHz.

10687. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-08-15 11:07:56 UTC
From: david
Topic: 9398 Message: 10687

Hello All,

I was working through the logs, extracting the night's report and mentally composing my lament about the state of the ionosphere, when I found a message from $20L Arkhangelsk. This was a 'first' for me. And there were five messages in total.

So, no complaints, today. However, I do seem to have a local problem with 490kHz, where reception is much poorer than 518. The screens look the same for each frequency, but 490kHz produces a much lower percentage of clear decodes out of all the signals it records. Time to fire up something like Spectrum Lab and search for low-level local interference

Logs over 1000km

Hello David,

Local interference might be the cause, however 490 kHz is much more occupied with NDB carriers than 518 kHz.

73,
Roelof

Roelof,

I think you may have highlighted the root of the problem. I can see several nearby carriers around 490.
I have had a LZ1AQ loop sitting in the garage since I moved here over two years ago. It has been waiting for me to install it. This could be my opportunity to try some directional reception, to see if I can prove that particular carriers are causing some of my problems. I have been following your experiments in comparing loop and whip. I think now might be the right time for me to run some more cable down the garden.

Best Wishes
David gm8xbz

From: Dirk Claessens
Topic: 10684 Message: 10691

Hello Joachim,
I've just checked with REU: L2C has never been logged there.I can only guess that some extraordinary propagation conditions must be in play??
Buenos Aires is roughly 11.500 km from our QTH, nothing exceptional on HF, but the path is almost straight southward, and crosses the equator.I will monitor 8MHz again tonight and see what comes up.
73 - Dirk

Hi, Dirk, glad you also managed to log it. Isn’t that strange that we haven’t been able to log it before? 73s Joachim Rabe

10692. REU - RNA - RWW NAVTEX editor

From: roelof@...
Topic: 10692 Message: 10692

Hello all,

It has been a while, but effective of today, I am enlisted as new REU/RNA/RWW NAVTEX (and other modes, except NDB's) editor.
As successor of Vincent, I hope to provide as good a service as he did.

There have been no log entries in REU/RNA/RWW over the last few month. I hope to catch up as soon as possible and will start with one listener at a time as that is the fastest way to proceed.
Once all backlogs for a particular listener are ready, I will sent an email here.

For backlogs, I will use the NAVTEX (and other modes) Yahoo group messages list.

If you should like a change in your listener details, please let me know by email direct:

roelof@...

If there is anything else that needs attention, please let me know as well.

Best regards,
Roelof Bakker

Hello Dirk,

As you might have seen, I have for once entered the administrative domain.

Can you guide me where to find the station details of L2C, so I can enter it in REU and upload the logs?

Thanks!

73,
Roelof

10694. AW: [navtexdx] NAVTEX from L2C, BUENOS AIRES, ARG on 8416,5 kHz

From: Joachim Rabe
Topic: 10684 Message: 10694

Hi Roelof,

I am glad to hear, you will be taking over the editor-function from Vincent.

Good luck!

If you look in the GMDSS Master Plan (http://www.ubak.gov.tr/BLSM_WIYS/AAKKM/tr/pdf/20140310_112345_77857_1_79302.pdf), you'll find geo coordinates and schedule for Buenos Aires PNA Radio on page 125.

In this document (http://www.wmo.int/pages/prog/www/ois/Operational_Information/Newsletters/2000_2009/2006/Mar06/VolumeD/Ch1/IndexOfCallSigns.pdf) you'll find the Call Sign "L2C".

Hope that helps.

Dirk,

you must be right – since conditions on HF deteriorated yesterday (http://www.hamqsl.com/solar2.php) I only logged UAT at 1915 UTC and a short but fragmented message from L2c at 0030 UTC.

Even $04F – NMF – BOSTON – USA didn’t make it into the log at 0140 UTC.

Hi all,
First off: a BIG thank you to Roelof for taking up the REU/Navtex editorship!(Roelof: I know that tools are available for importing logs into REU, but if you feel that yet another better log format could make things easier for you, just let me know and I will implement it in Yand)

Joachim: Thanks for providing the info on L2C!Yes, L2C has dissapeared all the sudden, I could only log some scattered fragments at 03:00
It seems that propagation on 8 Mhz has gradually collapsed over the night.
First, I got crystal clear copy from UAT, note the CF, YaNDS new "Crest Factor" signal quality indicator

```

Subject: AW: AW: [navtexdx] NAVTEX from L2C, BUENOS AIRES, ARG on 8416,5 kHz

Dirk, you must be right – since conditions on HF deteriorated yesterday (http://www.hamqsl.com/solar2.php) I only logged UAT at 1915 UTC and a short but fragmented message from L2c at 0030 UTC.Even $04F – NMF – BOSTON – USA didn’t make it into the log at 0140 UTC. 73s Joachim Rabe

Betreff: Re: AW: [navtexdx] NAVTEX from L2C, BUENOS AIRES, ARG on 8416,5 kHz Hello Joachim, I've just checked with REU: L2C has never been logged there.I can only guess that some extraordinary propagation conditions must be in play?? Buenos Aires is roughly 11.500 km from our QTH, nothing exceptional on HF, but the path is almost straight southward, and crosses the equator.I will monitor 8MHz again tonight and see what comes up. 73 - Dirk

Hi, Dirk, glad you also managed to log it. Isn’t that strange that we haven’t been able to log it before? 73s Joachim Rabe

10697. NAVTEX from Zealand, HOL

From: roelof@...
Topic: 70 Message: 10697

Hello all,

Yesterday the Kyoto Dst made a steep dive to -65 and has decreased further overnight. Propagation from Canada collapsed completely and a decent amount of static did not help either.

On HF propagation is still depressed and last night I noted on 40 meter typical "aurora flutter" on the signals.

NAVTEX 490 kHz log over 1000 km LZ1AQ loop:

From: roelof@...
Topic: 10698 Message: 10698

Hello Dirk,

>>>
(Roelof: I know that tools are available for importing logs into REU, but if you feel that yet another better log format could make things easier for you, just let me know and I will implement it in Yand)
<<<

Martin has done an amazing job and the log format can be set up for each individual listener. Once set up, the log format of YaND is excellent and it is just a matter of copy and paste. Before entering the data base, there is a check which flags faults and inconsistances. Hence the whole system is quite idiot proof!

To make it possible to enter historical logs, station changes are made, whilst maintaining the former data. E.g. at some time $01X changed from Reijkjavik to Grindavik. Both are in the data base and I have to check manually which one is entered.

If you or anyone else spots this fault, you now know how it could happen!

73,
Roelof

Roelof,

Thank you for taking on this task. It is a very valuable one, as REU/RWW offers a repository of information that we all find different uses for. Your generous gift of your time and your endeavours is greatly appreciated.

Best Wishes
David gm8xbz

Hello all,

It has been a while, but effective of today, I am enlisted as new REU/RNA/RWW NAVTEX (and other modes, except NDB's) editor.
As successor of Vincent, I hope to provide as good a service as he did.

Hello All,

Is this a good opportunity for us all to make sure we are using the same labels and descriptions? I realised, for example, that my Station List still has Piombino as Ixx. But there are also different names for transmitter sites, like Pinneberg/Hamburg, that occur around the Internet, even on 'Official' sites.

Regards
David gm8xbz

Work in the house is almost finished, so time for some Navtex listening. It seems that I have not missed very much in the past days. Just some decent loggings.
On Aug 7 Dirk presentef an interesting loop/mini whip comparison the results of which a can can underline. I have made the same experience. The mini whip provides good omnidirectional reception. The ALA1530 is stronger in its main lobe and weaker in its side lobe. The difference becomes smaller when it is dark but does not disappear completely.

Hello All,

No logs from me today, I'm afraid. Although my decoding PC is deliberately set to 'No Automatic Updates' from Windows, I had forgotten about the video card, and it decided to download new software. It rebooted the machine, and both instances of YaND were closed.

I am mostly using Windows 7 on my PCs, and am being pestered by the OS to upgrade to Win 10. However, I see that Win 10 does not allow you to opt out of automatic updates. Does anyone know what effect the Windows 10 update process has on programmes that are running?

Best Wishes

Hi David,
Yand's station database was compiled from Alan G4TMV's Navtex bible, which is consistent with REU.Regarding station names, it is my opinion that consistency is more important than accuracy.A few examples: up to 2 years ago we all thought that Den Helder's transmitter was located in Den Helder.It was through investigation of an incident with transmitter testing (and a weird carrier on 518.085) that it was discovered that the transmitter was located in Scheveningen.
- The transmitter of Split is not even located near the town of Split, but on the island Hvar.- A town called Corsen does not exist. An area in the north west of France called Pointe de Corsen does exist,but the actual transmitter is located on Ile d'Ouessant.- And so on...

Hello Dirk, and Roelof,

Of course I agree that consistency is the most important thing. But I wasn't looking to change for the sake of change. On the contrary, I was thinking of selecting a name and sticking with it.
You referred to Alan's 'Navtex Bible', which I take to mean the World Navtex database. But my question was prompted by REU itself. In that we are offered alternatives of Hamburg or Pinneberg, Cabo de la Nao or Valencia, La Garde or Toulon, Riviere au Renard or Sept-Iles, and several others. It just seemed an opportune time to settle on one. I don't mind which. I will happily fall into line with one decision or another.

I gave as an example that I still listed Piombino as Ixx. I see that some reporters use IGS. I can't find a source for that. I must have missed it somewhere. Can you point me to it? I don't like to fiddle with my Stationlist because it is working but, if it needs changing, I'll have a go at it.

Best Wishes
David

Hi David,
Selecting a name and stick with it is not always possible, which is a pity.
Over the years, navtex stations come and go, or are physically re-located.When stations are re-located, their call signs may or may not change.
The best example I can give is the total reorganisation of all Italian stations, some 4 years ago.My Yand log database started in january 2008. When I filter it on 3R, I get 2 name/call combinations:3R IAR Roma and, starting from january 2011: 3R ICH La Maddalena,SAR.
When I filter on 3T, I get 3T Cagliari,SAR (now out of service, re-located to La Maddalena), and 3T 3VL Kelibia,TUN (has been active, but now inoperative since the troubles in Tunesia)
Another one: 2R CTV Monsanto,POR => 2R CTA Penalva,POR

For all examples, it would not make sense to rename the stations to their "newest" names, as their locations are totally different, and the call signs.
I don't have all the answers though...
Hamburg/Pinneberg: Is Pinneberg a more accurate locator?Cabo de la Nao is only used for 490KHz, and Valencia for 518.The distance between both cities is ~100km; could there be 2 transmitter sites?
One thing is sure: it is a bit of a mess...Regards - Dirk

Hi All,

Just to show how complicated the issue of station names can be, the Canadian Coastguard have now started changing a number of their NAVTEX stations and MF and HF station names as well.

Prince Rupert and Tofino NAVTEX are now shown as being under the control the control of Prince Rupert MCTS, so that will just make things even more confusing now.

I've attached some screen dumps of the changes.

Station names are the things that headaches are made of, and trying to make sense of them all can be a real pain. Thankfully the REU/RNA/RWW system has its own calls, so at least we can always identify the stations by those (provided they don't change slots that is!) :-D

Thank you to Roelof for taking over from Vincent, it's a big pair of shoes to fill, but if anyone can do it I'm sure Roelof will.

Alan.

Hello All,

A better log than yesterday's blank, but it reflects the lack of DX.
On my 490kHz waterfall, I could read the ident of the NDB, SIL - 489 with a little difficulty. It comes right in the middle of my Navtex passband, and was easy to see in between the Navtex transmissions. I don't think that helped.

10718. LOGS REU : NAVTEX from L2C, BUENOS AIRES, ARG on 12579 kHz

Yahoo group: navtexdx (2015)
Date: 2015-08-19 04:26:47 UTC
From: Joachim Rabe
Topic: 10718 Message: 10718

Hi list,

last night and early this morning I was also able to copy L2C from Argentina on 12579 which I never logged before on this frequency.

Date UTC QRG ID Station ITU

20150818 2100 12579 $06R L2C, BUENOS AIRES, ARG

20150819 0030 12579 $06R L2C, BUENOS AIRES, ARG

Hello All,
Propagation was better than the A-Index suggested. Den Helder was just slow enough starting in their time-slot to allow me to log the first message from $03P Haifa (twice), which made a pleasing addition.

10721. GEN - US Coast Guard changes

Yahoo group: navtexdx (2015)
Date: 2015-08-19 14:38:45 UTC
From: Alan Gale
Topic: 10721 Message: 10721

Hi All,

An interesting post from James T. Pogue on the UDXF mailing list,
I wonder what effect if any this is going to have on their
NAVTEX & HF NBDP Operations?

From: "KH2AR@... [UDXF]" <UDXF@yahoogroups.com>
Date: Wed, 19 Aug 2015 12:35:42 +0000 (UTC)

In case you missed this or no one else has posted. Sad news for us
old Coast Guard Radiomen.

R 181237Z AUG 15
FM COMDT COGARD WASHINGTON DC//CG-6//
TO ALCOAST
ALCOAST 331/15
COMDTNOTE 2000
SUBJ: COMMUNICATION AREA MASTER STATIONS (CAMS) CONSOLIDATION
A. Telecommunication Manual, COMDTINST M2000.3 (series)
B. Telecommunication Tactics, Techniques, and Procedures (TTP)
CGTTP 6-01.2 (seires)

1. The Coast Guard will consolidate the Atlantic and Pacific
Communication Area Master Stations (CAMS) to create a single
Communications Command (COMMCOM). COMMCOM will operate the Coast
Guard's long range communications system and contingency
communications assets, assist with operational planning, expand
existing training in tactical communications operations, and
interface with other government agencies. COMMCOM will be
responsible for Coast Guard communications interoperability
and National Incident Command communication requirements.

2. Background. COMMCOM will be established on 09 Sep 2015 under the
operational
and administrative control of COMLANTAREA.

3. Impact. The following units will be disestablished as a result
of this project:
A. CAMSLANT
B. CAMSPAC
C. COMMSTA BOSTON
D. COMMSTA MIAMI
E. COMMSTA NEW ORLEANS
F. COMMSTA HONOLULU
G. COMMSTA KODIAK

4. With the exception of Kodiak, these units will be unmanned and their radio systems operated remotely by the COMMCOM. A COMMCOM detachment, COMMDET Kodiak, will remain at the former COMMSTA Kodiak facility to provide radio services for the Alaska region. An additional COMMCOM detachment, Mobile Contingency Communications (MCC) West will be established in Novato, CA, to provide contingency communications response and communications assist team (CAT) services for PACAREA units. ESD Novato will be established to provide continued electronics support to the former CAMSPAC facilities. Facilities engineering, grounds and electronics maintenance, along with other remaining support responsibilities will shift to regional bases along with resources to provide this support. This consolidation reduces billets required to operate and maintain the CG long range communication system from 418 to 208 and saves over $10.5 million annually. These organizational changes not only achieve significant budgetary savings but also align the mission and support with a modernized CG. The Operating Facility Change Order (OFCO) directing these changes was provided via SEPCOR.

5. The present system of CAMS and COMMSTAs was established in the 1970s to provide HF communications for CG command and control (C2) and maritime public safety. With the move to satellite based communications, the need for HF communications, particularly for C2, has dramatically declined, making it possible to reduce and consolidate resources while still meeting all mission requirements. This change also addresses growing CAMS missions, contingency communications and communications assistance, by reallocating billets to supplement current staffing. Mariners will not experience any degradation or change in the services the CG communication system now provides nor will the changes negatively impact how they communicate with the CG to obtain emergency assistance. The CG will continue to provide high seas weather broadcasts, monitor HF distress and safety radio systems, and provide C2 communications for CG units.

6. Assessment of impact on operational communications policy and TTP is ongoing and will be addressed via changes to references A and B.

7. Public Affairs Guidance: COMMCOM, COMMSTAs, CAMSLANT, and CAMSPAC are authorized to engage the media and public on how this initiative affects their unit. Unit personnel should contact their servicing Public Affairs Office for support and specific guidance. Questions regarding the policy itself or the ultimate decision to consolidate the communications system should be directed to the appropriate District, Area, or Headquarters public affairs office.

8. My point of contact for this project is Mr. Freddy Montoya, COMDT (CG-652), (757)686-4035, Freddy.L.Montoya(at)uscg.mil

9. RADM Marshall B. Lytle, Assistant Commandant for Command, Control, Communications, Computers & IT, sends.

10. Internet release is authorized.

Hello all,

Back logs for the following listeners have been updated up to
today.

David Atkins
Vincent Schriel
Giuliano Bertozzi
Marcus Ramos
Vernon Matheson
Mike Thayne
Frans Vink
Hans-Juergen Karius
Maurizio Marini
Carlo Pini
Bruce McCreath
Dirk Claessens

I am now busy uploading my own logs.
If I have missed anyone, please let me know.

$04I, Upernarvik, GRL, 518 kHz has been added to the station list.
If anyone who has ever logged it and should like it to be entered in
REU/RNA/RWW, please forward date and time (UTC) of reception. That
is all I need to know.

I will upload logs at the same day as I see them on the list.

73,
Roelof Bakker

From: david
Topic: 10698 Message: 10730

Hello Roelof,

Thank you. A first class job.

On the subject of Upernavik, there seems to be some disagreement about its attribution. The much-vaunted 'bible' has it as $17I. The UK's Navtex centre has it as $18I, as does the 'DXInfo.com' site, and Wm Hepburn has it as $04I, as do you.

I have not knowingly managed to log the station yet, but I hope we can come to a simple agreement about it.

Best Wishes,
David

Hello all,

Back logs for the following listeners have been updated up to today.

David Atkins

<...>

$04I, Upernarvik, GRL, 518 kHz has been added to the station list. If anyone who has ever logged it and should like it to be entered in REU/RNA/RWW, please forward date and time (UTC) of reception. That is all I need to know.

Hello David,

Where administrators are good at is causing ambiguity to stress
their legitimaticy. Simple rules don't earn real money!

I am no expert in licensing documents etc. and I simply follow the
ID's as used in YaND. I gather the new NAVTEX zones are not all
effective yet. Maybe Alan Gale can shed some light on this.

More important: conditions seems to improve!

73,
Roelof

Hello Roelof & Dave,
Yand lists Upernavik as 18I OYN Upernavik/Disko Island.I have logged it once - very weak, in 2013

20130921 0121 518 $18I OYN Upernavik/Disko Isl.,GRL 3718
2013-09-21 01:21:51> !~~~~7
2013-09-21 01:21:53> Z~~C~~~+79~
2013-09-21 01:21:56> ~-10120 UTC SE~ 13
2013-09-21 01:22:04> ~~433,)-,$ UPERNAVIK~NO MESSAGE ON HAND
2013-09-21 01:22:21> NNNN~{}{}I EE UTN 026 38 75~
You may remember that about 2 years ago the IHO Navtex board decided to assign navareas to the Arctic.This wasn't the case before that, and Upernavik was part of Navarea IV, along with all other stations on the west coast of Greenland.(04W Nuuk aka Kook Island, 04M Simiutaq/Cape Farewell)

According to this IHO document, https://www.google.be/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&uact=8&ved=0CCAQFjAAahUKEwjCuJKjnLjHAhUCPxQKHewdAM0&url=http%3A%2F%2Fwww.iho.int%2Fmtg_docs%2Fcom_wg%2FCPRNW%2FWWNWS5%2FWWNWS5-3-2-XVII_XVIII.pdf&ei=EBPWVcLwFoL-UOy7gOgM&usg=AFQjCNG3x5wCvAju8jLt4QCgECxk7sx9gQ&sig2=ZsgD1Hw8tsE7l2DSFSJBTw

Navarea XVIII extends from 67N to 90N, so Upernavik at 73N sits definitely in that navarea.
Navarea XVII does not currently have any stations in operation.
Names and exact locations for stations on Greenland have always been problematic...Take Simiutaq/Cape Farewell for instance: why the /Cape Farewell?- Cape Farewell is a cape on the most southern tip of Greenland- Near to that location lies Grønnedal, home of a Danish naval base (ISLAND COMMANDER GREENLAND as it appears in Navtex messages)- All Navtex stations on Greenland are remotely controlled from Grønnedal, this is documented.
  (Formerly known as Green Valley when the US owned it, the latest "official" name now seems to be Kangilínguit. (Inuit name?)
- Searching for Simiutaq in Google Earth offers 4 choices:Simiutaq Island,Qeqqata,Greenland/Simiutaq,Qaasuitsup,Greenland/Simiutaq,Kujalleq,Greenland and Simiutaq,Greenland...
I have no idea which is the right one, and I guess the initial DXer who named the station Simiutaq/Cape Farewell didn't either :0)(Is Simiutaq perhaps a province??)

Regards - Dirk

Hi David,

I wonder what version you are using (The current one is 13.7)? This shows Upernavik as being in Navarea XVIII, so possibly you are still on an older version?

The attached Admiralty file shows its location, which is definitely area 18 now.

The 2015 International NAVTEX Conference takes place next week in Monaco, and one item that caught my eye in the Navarea 1 report was that it now shows Corsen as being in Navarea 1 rather than Navarea II as was previously the case, I haven't seen any mention of this is any of the Weekly Notices. To make things even more confusing it's also listed in the Navarea II report as well, so I assume this means that it's now covering both areas? Even the map they show of its service area is confusing, though if other maps I've seen are correct, then it's just the northernmost sliver that is in Area 1. Think I feel yet another headache coming on...

It also shows a new station planned for area III at Poti in Georgia, this will be on 490 kHz only and in slot [G].

Alan.

P.S. Is anyone else having problems accessing the ndblist website? Sometimes it lets me in, sometimes it doesn't, this has been happening since they re-located
their servers last weekend. If it isn't just me that's having problems I will get onto technical support. I wasn't able to access at all just now

if I entered
www.ndblist.info but if I just put ndblist.info it works, something
seemed a bit
screwed up somewhere. Bloody computers, I've had a bellyfull of them in recent
weeks! >:-o

Hello Dirk,

I will change the ID to $18I.

Loking for the location of Upernarvik, I found this document.
There is a list of all Navtex locations in the area, including
Simiutaq:

http://www.ccg-gcc.gc.ca/Icebreaking/Ice-Navigation-Canadian-Waters/
Chapter1

Hi Alan,

I can get into the ndblist.info site without problems but, if I go to the datamodes section and pick the link for the NavtexDX group, it sends me to the 'neo' group page.

Always something, isn't there ;-)

Best Wishes
David

Hi Roelof,
Thanks for that link.Yand has it right for all stations, except for Simiutaq..The station is described as Simiutaq (Cape Farewell area), and when I enter the coordinates, Google Earth brings me to the south point of Greenland at ~ 60N near Cape Farewell. Yand uses (yet) another Simiutaq at 66N.
Upernavik is described as "Upernavik (Disko Island)" at72° 50'N 56° 09'WWhen I enter the coordinates, GE brings me to a small island ~5 km north of the town Upernavik, this make sense (although the island is not named in GE)

But when I enter "Disko Island" GE goes to an island 360km south of Upernavik, named... Disko Island...All straight Google searches also point to this latter island.
Or is the addition (Disko Island) meant as an identifier for the intended service area, as for Simiutaq (Cape Farewell)This is confusing stuff, I don't know what to think of this.
Regards - Dirk

  Hello Dirk,

I will change the ID to $18I.

Loking for the location of Upernarvik, I found this document.
There is a list of all Navtex locations in the area, including
Simiutaq:

http://www.ccg-gcc.gc.ca/Icebreaking/Ice-Navigation-Canadian-Waters/
Chapter1

Hello Dirk,

I found in this document:

http://www.tele.gl/da/privat/andre-produkter/kystradio/coastal-radio

NAVTEX Simiutaq mentioned as <Simiutaq, Qaqortoq>

Qaqortoq happens to be close to the location given in the
Icebreaking and Shipping Support Services document. So, I gather
this should be about correct. As the location is only given in
degrees/minutes it is not very accurate.

A photo of Qaqortoq reveals that there are communications
facilities, including a satellite link.

73,
Roelof

Hello Dirk,

Yet an other piece of information:

http://frv.dk/Sejladsinformation/Efterretninger/current/EfS_A_2012_U
K.pdf

Page 25 and following.
This gives about the same location for Simiutaq.

It also informs that NAVTEX services for the east-coast of Greenland
is carried out from Iceland by Reijkjavik and Saudanes.

Hello Roelof,
Thanks, have you spotted this?
Igdlutaligssuaq (Telegraføen).
NAVTEX ID: W
NAVTEX-frequency: 518 kHz

It has no end, this is yet another name for 04W Nuuk!And wait, there's even more :0)
From Wiki:
Sermersooq (Greenlandic: Kommuneqarfik Sermersooq, "Place of Much Ice") is a new municipality in Greenland, operational from 1 January 2009.[2] It is home to Nuuk (formerly called Godthåb), the capital of Greenland, and is the most populous municipality in the country, with 21,868 inhabitants as of January 2013.[3] The municipality consists of former municipalities of eastern and southwestern Greenland, each named after the largest settlement at the time of formation.
In a nutshell: Nuuk aka Kook Island aka Igdlutaligssuaq aka Telegraføen aka Godthaab aka Sermersooq...I propose we concentrate our efforts on the exact location of a station, not the exact name.
Regards - Dirk

Hello Dirk,

Yes, I have.

There is a strong movement for an independent Greenland and to a certain degree this is a fact now.
I gather that along goes the wish to get rid of Danish names and go back to the original ones.

As a Frisian, I recognise this and in Belgium it is the same for sure!

73,
Roelof

Dirk,

Nice.

One of those posts would be ideal to fix your antenna mast onto ;-)

Enjoy the break.

David

10756. YaND audio -- Tech

Yahoo group: navtexdx (2015)

From: david
Topic: 10756 Message: 10756
Attachments: 1 described; binary payloads are missing from this source WARC

Hello wise persons,

I'd like to follow up on a thread that Bob Blodge and Roelof {I think it was them - apologies if I am wrong} started a week or so ago, in which Bob said that he got better reception with one sideband than the other. My question is related.

I am using an Elad FDM S2 to receive Navtex. Because there is a strange behaviour of its own software when running two channels, I am using Studio 1 to create two virtual receivers, and I port the audio from the PC this runs on to another PC with an M-Audio Delta soundcard feeding two instances of YaND. Even with an excellent local signal, I see a higher audio peak on one tone than on the other. This happens on both channels, and swapping audio leads about doesn't change anything. The higher frequency tone produces a taller peak than the lower one. A typical view of this is attached.

It doesn't seem to affect the decoding. I don't get the stunning results that others manage, but it isn't terrible, either. I am simply curious about the causes. What do you think it is?

Is it a function of the transmitters? It seems strange that so many of them exhibit this
Is it a function of the receiver? I have tried other receivers, and I can still see the different peaks
Is it a function of Studio 1? I don't know
Is it a function of YaND? I don't know
Is it a function of the soundcard? I have a handful of $1 dongles, and they produce the same effect.

I have tried as many variations as I can, but can't eliminate the effect I see. Does anyone else see a similar phenomenon?

Best Wishes
David gm8xbz

Hello David,

I have noted this here as well and I don't think it has any effect.

On an other note, looking at your current logs and taking the not
too good propagation into account, I can't see much wrong with it.
If I remember correct, they have certainly improved.

73,
Roelof

Hello Dirk,

Enjoy your stay and thanks for the nice photo.
The grass looks just as green as here!

Propagation is not too good, so I gather you won't miss much
exciting!

73,
Roelof

Hello Roelof & David,

The different peak heights are absolutely normal, and are caused by the navtex/sitor CCIR476 bit coding scheme: only bit combinations containing 4 ones and 3 zeroes are used, so on average - Yand's spectrum is filtered over time - the lower peak will be typically ~25% lower.

You may however observe a slightly different peak ratio when receiving a sync signal, because this consists of only 2 special alternating characters, where a typical message will contain random text.

Regards - Dirk

10761. Re: [navtexdx] YaND- Different Size Peaks

Yahoo group: navtexdx (2015)
Date: 2015-08-24 12:48:02 UTC
From: bob.blodge@...
Topic: 10756 Message: 10761

Good Morning David,

Yes, I was the idiot that seemed to get better decodes on LSB than on USB.

I was never absolutely certain that this was the case but I have stuck to LSB

ever since.

Your " problem " with unequal peaks has nothing to do with choice of SB.

If you keep your display on the SPECTRUM mode and wait for the start of a

good local station, you will find that in the first few seconds the peaks are at

the same amplitude, but as soon as the coding starts they adopt their two

different forms. On LSB, the lefthand (lower frequency) peak is the highest,

and is usually the " cleanst ", as your righthand one is.

I hope this helps, David, and you may have prompted me to try USB again !

All the Best

Bob

From: david
Topic: 10756 Message: 10766

Thanks Bob.
I just used the 'CW' setting. I had never bothered to think which sideband
it was using. Now, I know my CW is USB. Every day, another step.

Regards
David

To: navtexdx@yahoogroups.com
Subject: Re: [navtexdx] YaND- Different Size Peaks

Good Morning David,

Yes, I was the idiot that seemed to get better decodes on LSB than on USB.

I was never absolutely certain that this was the case but I have stuck to
LSB
ever since.

Your " problem " with unequal peaks has nothing to do with choice of SB.

If you keep your display on the SPECTRUM mode and wait for the start of a
good local station, you will find that in the first few seconds the peaks
are at
the same amplitude, but as soon as the coding starts they adopt their two
different forms. On LSB, the lefthand (lower frequency) peak is the
highest,
and is usually the " cleanst ", as your righthand one is.

I hope this helps, David, and you may have prompted me to try USB again !

All the Best

Bob

Topic: 9398 Message: 10773

Hello All,

The Bodo and Vardo early slots were both masked by other signals for me. The earliest message I did receive was an out-of-slot transmission at 2315.

Logs over 1000km

10776. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-08-27 10:09:33 UTC
From: roelof@...
Topic: 70 Message: 10776

Hello all,

An other minor geomagnetic storm is in progress.

The K-index rose to 6 last night and the Kyoto Dst dropped to -84.
Amazingly T/A propagation did not collapse completely as on both
antennas decodes from VCO, Sydney, CAN were received.

The drop in the Kyoto Dst was not as steep as on August 15 and it
looks like the impact on propagation was not less imminent.

Hello All,

A distinct change in propagation, as experienced here. A tremendous drop in signals from the North, but a rise in signals from the South and SouthEast. Then, Grindavik appeared much later than usual, at 0542.

Logs over 1000km

Hello David,

Yes, Grindavik wa slate on 518 kHz, however it wa slogged at 21.34
UTC on 490 kHz.

A severe geomagnetic storm is in progress, so it will beinteresting
to see how long it will take for T/A propagation to recover!

Hello Hans,

Alger is most of the time blocked by Bodo here and I guess it is the same at your location. It is also quite rare here as well!

73,
Roelof

Hello All,

$03W Astrakhan is usually masked by LaGarde, but they made an out-of-slot transmission at 0007 that enabled me to get a rare [for me] logging.

From: Mike Thayne
Topic: 10692 Message: 10789

Hello Roelof,

Many thanks for volunteering to become the new editor for REU Navtex, your work will be greatly appreciated.
REU is a valuable source of information and is central to my "mode of operation", without it I am lost.
I have been away from home for a 3 weeks and may not have seen all the mails posted, so may I ask if DGPS logs should be posted on the Yahoo DGPS group or here and where is best to post HAM logs (when conditions improve!!).

Good luck in your endeavors
Best regards,
Mike, g3gms

Hello Mike,

Thank you for your kind words.

DGPS logs should preferably sent to the DGPS-list and HAM logs to the NDB-list.

Martin has done a remarkable job for RNA\REU\RWW, so it is very easy to upload logs, especially when provided by YaND. It only takes a couple of minutes each day.

73,
Roelof, pa0rdt

Hi Dirk,

The storms had missed you, and wanted to welcome you home ;-)
Hope the Cotswolds had nicer weather.

David

Yes, thunderstorms and humidity like in subtropical areas. I could report Split, Varna and Kerkyra on 518 kHz. That's it.

Hello all,

For the second day in a row thunderstorms passed overhead.
Last night the rain was extreme as in a short time 41 mm water came down. The communal drainage system was unable to cope with it and our scullery was partly flooded. I cleaned up the mesh in the middle of the night and no harm was done.

Reception was poor and in fact I amazed what still made it!

Hi David,
the source for IGS Piombino is William Hepburn site only
http://www.dxinfocentre.com/navtex.htm
No more info from Italian official coastguard.

Roby

10801. REU Navtex logs from Whitley Bay ENG

Yahoo group: navtexdx (2015)
Date: 2015-09-01 17:24:18 UTC
From: Mike Thayne
Topic: 10801 Message: 10801

Hello All,

Following Roelof's idea, I thought it might be interesting for me to compare one of my loop antennas at the same time as the miniwhip antenna.
The results seem to show the directivity of the loop agrees with Roelof's previous studies. At night time, distances between 200 and 800km are not reduced but over 1000km the directivity certainly can reduce the incoming signal strength in the direction of minimum. This can be either beneficial or detrimental depending on DX requirements, as previously noted by Roelof and Dirk.

With the loop minimum at 30?/210? (chosen to reduce local interference).
Signals not received on the loop but ok on the miniwhip:
UGE at 48?, LFO at 28?, LGP at 25?, LGV at 31? and EAL at 206?.
Also noted that EAR at 206? was received ok on the loop throwing a spanner into the results!

Mike Thayne, g3gms
Location : Whitley Bay, England,IO95gb

Attachments: 1 described; binary payloads are missing from this source WARC

Hello Mike,
What you observed for EAR Coruna is not that uncommon.What we call a null is of course not an absolute null, but a signal minimum.If the signal strength goes above the detection limit of the decoder, the station will be received, no matter what.
Both SeaTTY and Yand need a signal about 6dB above the noise floor to pull in sync, although the produced output will still contain many errors. With only a few dB more, output will start to become very legible because of error correction mechanisms. This is quite a narrow area, as illustrated in the graph below.Yand SNR is plotted against the % of errorless (non ~)characters for each line of text for some 5000 messages.
The graph is very noisy, mostly due to strong stations interfering with each other.The most dense area indicated in orange shows that the % correct characters goes up steeply to 90..100% for a SNR increment of ~10 to ~15.
At first I couldn't figure out why there are no values < 50% on the Y-axis??Then the penny dropped: Yand buffers the last 25 characters received. When >50% are error characters, a resync is forced.
Regards - Dirk

With the loop minimum at 30°/210° (chosen to reduce local interference).
Signals not received on the loop but ok on the miniwhip:
UGE at 48°, LFO at 28°, LGP at 25°, LGV at 31° and EAL at 206°.
Also noted that EAR at 206° was received ok on the loop throwing a spanner
into the results!

10803. Re: [navtexdx] REU Navtex logs from Whitley Bay ENG

Hello Mike,

Yes, this antenna arrangement is an interesting one.
Sometimes the loop is best; at other times the mini-whip.

In winter, the mini-whip is king, but only when static is absent.
Fortunately from January through April this is the case!

73,
Roelof, pa0rdt

Hello all,

Solar propagation indices are looking much more favourable.
If they stay the same for another five days, propagation will
improve considerable. That is when static will cooperate as well!

Topic: 7241 Message: 10806

Hi all,

I use YaND as the basis to start from. That works great. And then I check TrueTTY's raw log for fragments in the garbage that no decoder can decipher.

And I have made similar experiences with the ALA and the mini whip like Dirk, Roelof and Mike. As Roelof states that the mini whip will show its advantages in winter I am quite curious to see what comes.

Hi all,

I use YaND as the basis to start from. That works great. And then I check TrueTTY's raw log for fragments in the garbage that no decoder can decipher.

And I have made similar experiences with the ALA and the mini whip like Dirk, Roelof and Mike. As Roelof states that the mini whip will show its advantages in winter I am quite curious to see what comes.

10810. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-09-02 16:07:17 UTC
From: david
Topic: 9398 Message: 10810

Hello All,

Its the first full day of the new month so, again, here is a 24-hour scan. I have included the first clear decode of each station in each of its allotted time-slots. Out-of slot broadcasts are omitted, as are all but the first message in a scheduled 'bundle'.

There are some useful lessons for me in this exercise. Probably the most important [to me] is that FRC Corsen at 850km and DDH47 Pinneberg at 993km appear to be in a 'sweet spot' for me, and I have more reliable reception from them than from all but my most local stations.

It was a much better night for reception than we have had for some time. In a way, it is a pity that the time for the long list came now, as the long list hides a couple of very rare catches for my log with $09X Ismailia, $03J Varna, and $03L Constanta all appearing. I noticed that Constanta ran on for more than 15 minutes. If this is normal, I don't know why my log hasn't been filled with reports of the station in the past.

Special thanks to YaND for picking out Ismailia when it wasn't even in my list of 'targets'. It certainly is there now.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Sep 02, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

10811. REU Navtex logs from Whitley Bay,ENG

Yahoo group: navtexdx (2015)
Date: 2015-09-02 16:31:03 UTC
From: Mike Thayne
Topic: 10811 Message: 10811

Hello All,
Thanks to Dirk and Roelof for your comments on my last post.
Today I have compiled logs from last night into one list using the Miniwhip and Loop antennas, indicating which antenna received the log.

Hard to read too much into the results when the loop last night received LGV, UGE and CTV251 in the minimum loop directions but the Vertical Miniwhip did not receive them!

Mike Thayne, g3gms
Location: Whitley Bay, England, IO95gb
Distances in km.
Shown after distances: V = Vertical (Miniwhip Antenna), L = Loop Antenna.

Hello All,

A string of good copy from Arkhangelsk otherwise pretty dismal last night.
Antenna tests over for now, back to normal use on the miniwhip.

Hello All,

As others have noted, propagation seems to have taken a minor dip, again.

Hello All,

There were messages to say that the UK transmitters were off air, but the stations kept popping up, and there were no useful gaps to let the DX through.

Logs over 1000km

10820. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-09-04 10:01:34 UTC
From: dl4ybp@...
Topic: 7241 Message: 10820

Hi all,

As Dirk said, if you want to get all stations you need more than one antenna. So I made some comparisons.
How true that statement is. And in addition you need a lot of time to compare what you have received. ;-)

Nothing spectcular I read. Well, Las Palmas is for me; very seldom at my location. And for DX I always have to check the raw logs.

73
Hans, D4YBP

QTH : Lübbecke, Northwest Germany
Receiver : Rohde & Schwarz & EK 070
Antenna : ALA 1530 SSB+ (285 <--> 105 degrees)
Soundcard : Behringer U-Phoria UM2
Software : YaND 6.4 (the solid basis for identification;
plus a first look at the raw log)

```
20150903 1840 518 $03Q 9AS Split,HRV 1152
20150903 1850 518 $03R ICH La Maddalena,SA,ITA 1235

Hello David,

Same here, transmissions appear to be normal from UK. I wonder if a typo has been misleading us.
Looking through the messages, one appears to give a date for 15 Sept and others do not. See below.
Note Loran C at Anthorn also off on 15 Sept, see last message.

Regards,
Mike. g3gms

10830. RE: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-09-05 22:55:39 UTC
From: david
Topic: 9398 Message: 10830

Hi Mike,

The MoD uses a "Date Time Group" which always has the same format -- DDHHMM and the year is an optional tail. Month is assumed to be the current one. So, the message is dated at 0720 on 03Sept,2015. [The 'Z', of course refers to UTC].
Similarly, the Anthorn message was about an outage for most of Sept 3rd as well.

Regards,
David gm8xbz

Subject: Re: [navtexdx] Navtex Logs from W Scotland

Hello David,

Same here, transmissions appear to be normal from UK. I wonder if a typo has been misleading us.
Looking through the messages, one appears to give a date for 15 Sept and others do not. See below.
Note Loran C at Anthorn also off on 15 Sept, see last message.

Regards,
Mike. g3gms

Topic: 9398 Message: 10834

Hello All,

Oostende continues to send the message (using its "V" identity) about UK stations being off air, even though the message is an old one, and the stations appear to be transmitting to schedule. The message has an Address Indicator Group of AIG 1063. It appears to come from Northwood, but it seems they have forgotten to cancel it.

It was a good propagation night, as summers go, and I found $04J Sydney had come back. There were probably a few more rare visitors around, but co-channel interference prevented indisputable decodes. There were also a lot of NDB signals in the middle of the 490kHz passband.
Limnos sent its regular warning about unofficial broadcasts, but chose to do so using the wrong identifier.

10837. Re: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-09-06 15:15:49 UTC
From: Dirk Claessens
Topic: 9398 Message: 10837

Hi David & all,
And what about the messages below??First a short fragment with the W identifier, without a closing NNNN,and then - 2 seconds later - a normal Ostend V message about the outages.Signal quality is about the same for both messages, and I am pretty sure both messages came from the same transmitter.If the V-message had interrupted the W-message (from another transmitter), I would have expected the decoder to go in error with something like ~~~A~~D~~{} , where {} indicates a forced resync event.This is not the case, the 2 messages blend smoothly.
Regards - Dirk

Subject: RE: [navtexdx] Navtex Logs from W Scotland

Hi Mike,

The MoD uses a "Date Time Group" which always has the same format -- DDHHMM and the year is an optional tail. Month is assumed to be the current one.
So, the message is dated at 0720 on 03Sept,2015. [The 'Z', of course refers to UTC].
Similarly, the Anthorn message was about an outage for most of Sept 3rd as well.

Regards,
David gm8xbz

Hello David,

Same here, transmissions appear to be normal from UK. I wonder if a typo has been misleading us.
Looking through the messages, one appears to give a date for 15 Sept and others do not. See below.
Note Loran C at Anthorn also off on 15 Sept, see last message.

Regards,
Mike. g3gms

Hello Hans,

>>>
20150905 1759 518 $19A LGS Svalbard,SVB 2912
What might this have been? Wrong header transmitted?
<<<

Though never say never at LF, reception of Svalbard at that time at this time of the year is a bit unlikely. Unfortunately, my session started at 18:32 UTC, so nothing here to compare your raw log with.

73,
Roelof

Hi Roelof & Hans,
I tend to concur with Roelof.On REU, the majority of Svalbard logs are in the 00:00 and 04:00 time slots.In winter though, reception is possible in the 16:00 slot, but generally only in a solar minimum period.

logged here on december 25, 2010 (and also by Roelof, see REU for $19A)
16:01:38> ZCZC AZ38
16:01:40> 251~00 UTC DES 10
16:01:49> NO MESSAGES ON HAND AT SVALBARD RADIO VIA BOD~E RADIO ~PPW UPUPPM
16:01:51> NNNN

Reception time was 17:59. My guess is that Hans received Jeloya (scheduled for 18:00), with the ID-letter in error.Just 1 keyword (NORWEGIAN for instance, present in most Norwegian messages) is sufficient to fool Yand into a wrong ID.
Regards - Dirk

10842. Mystery Message claiming stations off-air

Yahoo group: navtexdx (2015)
Date: 2015-09-07 09:35:55 UTC
From: david
Topic: 9398 Message: 10842

Hello Dirk and all,

We had the same message again this morning [7 Sept]. It is almost certainly from Valentia $01W. As Dirk points out, there is no perceptible change in signal strength from message to message, and there is no forced resync. The transmission flow is smooth.

At 0338 Valentia sends message WA59 about a local Lightbuoy which terminates with NNNN --
At 0339 Valentia sends message WA58, the MODUK reference, which has no termination --
still at 0339 we get message VA91 WZ987, declaring the UK Navtex transmitters off air, terminating in NNNN --
Still at 0339 there is a single line NNNN --
And at 0339:59 Valentia sends message WA57 about a buoy light.

I'm sure Dirk is absolutely right about the continuity of transmission. It is almost as if the VA91 message is a forwarded paragraph within message WA58.

All we can do is speculate "why"?

Best Wishes,
David gm8xbz

Subject: Re: [navtexdx] Navtex Logs from W Scotland

Hi David & all,

And what about the messages below??
First a short fragment with the W identifier, without a closing NNNN, and then - 2 seconds later - a normal Ostend V message about the outages.
Signal quality is about the same for both messages, and I am pretty sure both messages came from the same transmitter.
If the V-message had interrupted the W-message (from another transmitter), I would have expected the decoder to go in error with

something like ~~~A~~D~~{} , where {} indicates a forced resync event.
This is not the case, the 2 messages blend smoothly.

Regards - Dirk

Hello All,

The path to the North opened up early. East and West were not such good directions for me. I really must put up a loop in that direction.
There seemed to be a lot of interest in a dead whale, causing several out-of-time-slot broadcasts.

This will be the last report from me for a couple of weeks. Today, I have to lower the antennas prior to our holiday in the USA, primarily New Orleans.
{I have suggested that we can go to see the New Orleans Navtex transmitter, but the lady of the house has other ideas.}

Hello David,

>>> I really must put up a loop in that direction. <<<

Before waisting time and effort, you better set the sun's activity at the lowest level possible <<<

Kidding aside, propagation from the west is poor at the moment and I can only receive a couple of Canadian NDB's at weak strength during a short lived pre-sunrise enhancement.
In July propagation was much better and even a formidable beverage antenna won't help much at the moment.

I'm afraid we will have to sit this out!

73,
Roelof Bakker

Hi all,
After problems for some hours with signing-in into the group I finally managed.

With the ALA in this direction all Scandinavian stations, and not only the listed, came in strongly as well as the French and the Italiens. Astonishingly strong signals from Varna. And even Haifa with the ALA's sidelobe into that direction. On the other hand I wonder why Coruna was received on the mini whip and not on the ALA.

73

Hello Hans,
A loop will only have deep nulls for horizontally incoming (groundwave) signals.At night, with sky wave signals coming in at high angles, the nulls may partially or completely disappear, and the loop will more or less behave as vertical. To make things even more complicated, this is also distance related, as DX may come in at low angles..
For my QTH I have found that at night, the loop will be nearly omnidirectional under ~1200km, but will again show nulls for distances > than 1200..1300 km.For TA/DX incoming at very low angles, nulls are present and a loop may make the difference because interfering signals from Europe will be supressed.
Examples, loop pointing E/W
Rogaland at 800 km: whip = loop

Subject: [navtexdx] Navtex from Lübbecke

Hi all,After problems for some hours with signing-in into the group I finally managed. With the ALA in this direction all Scandinavian stations, and not only the listed, came in strongly as well as the French and the Italiens. Astonishingly strong signals from Varna. And even Haifa with the ALA's sidelobe into that direction. On the other hand I wonder why Coruna was received on the mini whip and not on the ALA.

Topic: 10852 Message: 10852

Hi all,

In this configuration the reception results are very similar. The two receivers are almost identical. The EK070 has a VFO and the EK071 has buttons to push. The difference here are the two antennas.

Thank you Dirk for your examples on how whips and loops behave. Impressive. I will have a look at my raw logs and am curious about what to find.

Hi Roelof,

I noticed that you use from time receiver SDR Afedri;
I'm
considering another economic receiver to use with your mini -whip and
Studio 1.
I think you're the right person to ask this question , given
your considerable experience.
what do you think about the Afedri SDR (to
receive Navtex) compared to Perseus ?

I have the opportunity to buy a
used Afedri to 200 euro.

Thank you very much.

73, Maurizio IW2GOB

Hello Maurizio,

I am using a AFREDI and Studio 1 for NAVTEX on 490 and 518 kHz.
As you may know, it is possible to run two software receivers in
Studio 1. This way it is easy to cover both 490 and 518 kHz with one
hardware receiver.

I have not noticed any difference between the PERSEUS and the Afedri
on NAVTEX 490 / 518 kHz. With the Afedri you have to set the RF and
IF gain, but that is no big deal.

If you have a strong MW station nearby, there might be an overload
problem. However, this can be easily cured with a bandpass filter
between antenna and receiver. (I can build one, no problem at all).

73,
Roelof Bakker

Roelof,

Can you make a printscreen of these settings?

Vincent

Thank you Roelof for the helpful information;
I have a MW station
nearby (RAI 900 Khz), in fact I have to keep perseus with the 10 dB
attenuator switched on....
But I have a good external bandpass filter
too....so.....no problem....

Do you use LAN or USB connection ?
USB
power or external 7,5 v ?

Thanks,

Maurizio

Hello Maurizio,

I am using LAN and an external 7.5 volt power supply.
However for NAVTEX only, USB will work fine.

73,
Roelof

10864. Navtex log from Antwerp,BEL 20150909

Yahoo group: navtexdx (2015)
Date: 2015-09-09 14:15:03 UTC
From: Dirk Claessens
Topic: 10864 Message: 10864

Hi all,
Strange propapation patterns...Nothing from Turkey, just 1 weak message from Kerkyra, but Haifa logged in 3 time slots,Strong signals from Arkhangelsk but nothing from Bodo/Vardo,Sao Miguel logged in 2 time slots, although very weak at 00:54 with just 2 keywords: Pico and Faial.
Regards - Dirk

Hello Maurizio,

Propagation is weird at the moment as the sun is very restless.
I have been told that when heading for solar minimum, these
disturbances are worst!

73,
Roelof Bakker

Hello Roelof,
"NORWEGIAN" is a keyword for all Norwegian stations.But if the ID-letter was received in error, Murphy will strike for sure :o)

Regards - Dirk

Hello all,
A nice example of a correct flagged Svalbard as received on the loop can be found below:

10872. Piombino Radio

Yahoo group: navtexdx (2015)
Date: 2015-09-10 12:34:56 UTC
From: Robert Connolly
Topic: 10872 Message: 10872

Hi,

I have just started going through my logs for the last couple of days for navtex 490kHz and have noticed reception of a new Italian station Piombino using time slot N. According to Bill Hepburn's site this station is shown as planned but has also come up again at 0210 the last couple of nights with a good signal. Piobino seems to be located south of Livorno in Tuscany, Italy. I assume that the station is testing at present.

10873. Re: [navtexdx] Piombino Radio

Yahoo group: navtexdx (2015)
Date: 2015-09-10 18:39:58 UTC
From: Dirk Claessens
Topic: 10872 Message: 10873

Hi Robert,
Piombino is fully operational since ~April 2015. See 490/$03N on REU

Also see IHO document : https://www.google.be/url?sa=t&rct=j&q=&esrc=s&source=web&cd=4&ved=0CDMQFjADahUKEwivu_uSje3HAhVI0xoKHUGQBZs&url=http%3A%2F%2Fwww.iho.int%2Fmtg_docs%2Fcom_wg%2FCPRNW%2FWWNWS5%2FWWNWS5-3-3-1.1%2520-%2520Submission%2520by%2520Italy.pdf&usg=AFQjCNG-ixKP_ITmGIVcDpf2IZZcmIBbXQ&sig2=7Oa4fGkW7gmtxfSDYXxVSA&cad=rja
2. Due to Italian geography, during these 20 months, some lack of coverage was identified in the western part of Ligurian Sea.
In order to solve the mentioned issue, Italian Navtex coordinator requested to Secretary IMO NAVTEX Coordinating Panel the allocation of a B1 character for 490khz only use. The Panel allocated to Italy the use of a B1 characters (N).
The new NAVTEX station will be located in Piombino (see Annex 1). The coverage estimated range in maximum ground noise conditions is about 250 KM. The coverage area in medium conditions of propagation is about 600 KM. Piombino station will broadcast MSI in English language on frequency 490Khz and will become fully operational by the end of 2014.

Regards - Dirk

10874. Navtex log from Antwerp,BEL 20150910

Yahoo group: navtexdx (2015)
Date: 2015-09-10 19:10:11 UTC
From: Dirk Claessens
Topic: 10874 Message: 10874

Hello all,
Anyone got more from the (supposed) Novorossiysk transmission at 0008?The only readable keywords are UKRAINE COASTAL (WARNING?) and GUNNERY EXERCISES.
Transmission is on schedule for Novorossiysk, but I'm wondering why Russia wouldbroadcast coastal warnings on behalf of Ukraine, given the political troubles there? 3C Odessa,UKR is still active but is very rarely heard here.
Thanks and regards - Dirk

From: Dirk[mobile]
Topic: 10874 Message: 10879

Thanks Maurizio, it clearly was Novorossiysk.

Regards - Dirk

Dirk [mobile]

10880. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-09-11 08:57:24 UTC
From: dl4ybp@...
Topic: 7241 Message: 10880

Hi all,

Reception to the north and south was favourable last night. Signals on the mini whip were better from these directions as the ALA was pointed almost west--east. This also applies to the Scandinavian stations with a distance less than 1000 km and which are not listed here.
I cou receive more messages from the them on the ALA.
I could not receive anything from Novorossiysk here, not a trace.

73
Hans, D4YBP

QTH : Lübbecke, Northwest Germany
Receiver : Rohde & Schwarz & EK 070
Antenna : ALA 1530 SSB+ (285 <--> 105 degrees)

10881. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-09-11 09:47:05 UTC
From: roelof@...
Topic: 70 Message: 10881

Hello all,

Considering the state of the sun, propagation was not too bad.
I believe this is due to a low solar flux.

I found 7 perfect decodes from the Azores in the 04:40 UTC time slot. The weirdest catch, however, is a perfect decode from Archangelsk. Located far north this is normally one of the stations that suffers most from a geomagnetic storm.

NAVTEX 490 kHz log over 1000 km LZ1AQ loop:

```
20150910 1852 490 $03R SVL Limnos,GRC 2147
20150910 1940 490 $03W ICI Sellia Marina,ITA 1735
20150910 2040 490 $03E IQM Mondolfo,ITA 1114
20150910 2145 490 $01K TFA Grindavik,ISL 2045
20150910 2159 490 $03L YQV Constanta,ROM 2027
20150910 2210 490 $03N IGS Piombino,ITA 1087
20150910 2233 490 $03P SVK Kerkyra,GRC 1821
20150911 0018 490 $03C TAN Izmir,TUR 2309
```

NAVTEX 518 kHz log over 1000 km mini-whip:

10884. Navtex log from Antwerp,BEL 20150911

Yahoo group: navtexdx (2015)
Date: 2015-09-11 18:00:51 UTC
From: Dirk Claessens
Topic: 10884 Message: 10884

Hello all,
Improved conditions from all directions.
It's been a long time ago that I received 3 Turkish stations in one log.

Regards - Dirk

```
QTH            : South of Antwerp, Belgium
Locators       : 51.07.23N 04.28.03E [JO21je]
Receiver1      : Perseus SDR
Receiver2      : Lowe HF225
Antenna1       : paOrdt Mini-Whip @ 5m.
Antenna2       : lz1aq/pa0rdt 1 mtr. wideband loop
Navtex-Decoder : YaND 6.4
```

```

10885. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-09-12 11:52:34 UTC
From: dl4ybp@...
Topic: 7241 Message: 10885

The reported good conditions did not reach me. Propagation gave interesting signals from the Canaries etc. a wide berth around Lübbecke.

Reception here was even worse than the night before. Next time better luck.

73
Hans, DL4YBP

10886. Re: [navtexdx] Navtex from Lübbecke

From: roelof@...
Topic: 7241 Message: 10886

Hello Hans,

An other major geomagnetic storm is in progress.
If the sun stays quiet from now on, good propagation might be as
much as 10 days away!

73,
Roelof

Hello all,

not bad; good decode from Las Palmas (not so frequent here):

```

10891. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-09-13 07:42:57 UTC
From: roelof@...
Topic: 70 Message: 10891

Hello all,

For the time being, NAVTEX reception on the LZ1AQ loop has been put on hold, as I need my PERSEUS for an other project.
For the time being the Afedri will be used for 490 / 518 kHz fed by a mini-whip antenna.

Somehow 490 kHz reception went wrong, so only a report for 518 kHz today.

NAVTEX 518 kHz log over 1000 km mini-whip:

```
20150912 1842 518 $03P 4XO Haifa,ISR 3307

From: Vincent Schriel
Topic: 9427 Message: 10892

For the first time Las Palmas in the log. My antenne (ALA 1530) is in the east/west direction and the Canarias Islands are in the south.

10898. Navtex log from Antwerp,BEL 20150914

Yahoo group: navtexdx (2015)
Date: 2015-09-14 15:08:06 UTC
From: Dirk Claessens
Topic: 10898 Message: 10898

Hi all,
Daily log over 1000km.I seem to be in a sweet spot for Cyprus Radio/5BA?Nobody else is reporting it; it was weak and scattered, but just enough for Yand to ID it.
Regards - Dirk

Hello all,

At dinnertime a thunderstorm passed overhead yesterday and there was a lot of static activity over middle and western Europe. However at local midnight static had almost completely disappeared.

Condsidering current propagation the log is not too bad.

NAVTEX 490 kHz log over 1000 km LZ1AQ loop:

```
20150914 1814 490 $03N IGS Piombino,ITA 1087

10902. Re: [navtexdx] 518 this night near Munich

Yahoo group: navtexdx (2015)
Date: 2015-09-15 08:54:19 UTC
From: roelof@...
Topic: 10900 Message: 10902

Hello Wolfgang,

20150915 0337 518 $03G ICH Sellia Marina,ITA 1086
20150915 0330 518 $03V IQA Augusta,SCY 1228

Sellia Marina has the letter V and Augusta is now Sellia Marina.
Your log should have been:

20150915 0337 518 $03V ICI Sellia Marina,ITA
20150915 0330 518 $03V ICI Sellia Marina,ITA

Which decoder do you use?

Best regards,
Roelof Bakker
REU NAVTEX Editor

Hi Roelof, thanks for the info. Seems I was too long absent on 518.
I used Yand 6.3 and have now updated to 6.4 with a new stations.txt.
Hopefully last night was the last thunderstorm for this season here ....

Regards, Wolfgang

10905. A strange decode

Yahoo group: navtexdx (2015)
Date: 2015-09-15 12:55:42 UTC
From: John Bruce McCreath
Topic: 10905 Message: 10905

I know that $04H is Prescott, ON (tx actually is at Wiarton, ON) so I was surprised by this decode from the south Caribbean. Took a look at Wm. Hepburn's site and it lists a PJC in area IV South. Must have been two transmissions merging into one.

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna : Delta loop 33M a side, apex up
Decoder : YaND V 6.3
Exclude : Less than 3,000 km
Best DX : $15K CBP, Puerto Montt, Chile

10907. Navtex log from Antwerp,BEL 20150915

Yahoo group: navtexdx (2015)
Date: 2015-09-15 18:47:07 UTC
From: Dirk Claessens
Topic: 10907 Message: 10907

Hi all,
A night on the loop pointing E/W.Nothing from the north of course, but good signals from the eastern Med.
Regards - Dirk

From: Dirk Claessens
Topic: 10905 Message: 10908

Hi Bruce,
Nice catch!04H is indeed assigned twice.Over here in Europe it's even worse, the same time slot is sometimes assigned to 3 stations, all perfectly receivable, but not simultaneously :0)

Regards - Dirk

From: "John Bruce McCreath weazle@... [navtexdx]" <navtexdx@yahoogroups.com>
To: navtexdx@yahoogroups.com

Subject: [navtexdx] A strange decode

I know that $04H is Prescott, ON (tx actually is at Wiarton, ON) so I was surprised by this decode from the south Caribbean. Took a look at Wm. Hepburn's site and it lists a PJC in area IV South. Must have been two transmissions merging into one.

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna : Delta loop 33M a side, apex up
Decoder : YaND V 6.3
Exclude : Less than 3,000 km
Best DX : $15K CBP, Puerto Montt, Chile
Web Site : www.hurontel.on.ca/~weazle

Hello all,

today I received the afedri SDR And tonight I will setup
it with miniwhip.

My logs:

From: dl4ybp@...
Topic: 7241 Message: 10917

First clear signs here in Lübbecke that we are heading into autumn, propagation wise. The weather gives much clearer signals. ;-)

10918. Navtex log from Antwerp,BEL 20150917

Yahoo group: navtexdx (2015)
Date: 2015-09-17 14:33:30 UTC
From: Dirk Claessens
Topic: 10918 Message: 10918

Hi all,
I guess we must describe the current conditions as good, considering this a solar max period."Halfway T/A" is the best one can expect it seems.

Regards - Dirk

From: roelof@...
Topic: 70 Message: 10928

Hello all,

Propagation is certainly improving, however T/A is still almost non existent. It has been quite a while since I logged a Canadian NAVTEX station, but this morning VCO just made it due to a pre-dawn propagation enhancement!

NAVTEX 490 kHz log over 1000 km mini-whip:

```
20150918 1810 490 $03N IGS Piombino,ITA 1087

10929. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-09-19 09:40:13 UTC
From: dl4ybp@...
Topic: 7241 Message: 10929

Hi all,

Cyprus appeared after a long time again, Novorossiysk for a second time and Astrakhan for the first time this autumn. With such a short time after the sunspot maximum and a present sunspot number of 50-60 the lower medium wave band is doing quite well.

73 and have a nice day.
Hans, D4YBP

Receiver : Perseus (because it's more effective than the R&S EK071 with weak signals) and Studio 1 software
Antenna : ALA 1530 SSB+ (285 <--> 105 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments that no decoder can decipher)

```

Hello Mario,

You can definitely claim it as San Juan.
I have only a lot of garbage at the time from Penalva, POR!

73,
Roelof

Hi Roelof & Maurizio,
Well done Maurizio, you have proved again that T/A is possible from Italy!Let's hope the Dx-season is now really starting...keeping fingers crossed...
Regards - Dirk

Thank you Dirk & Roelof,

I hope this is the start of a DX season right for all of us !

Maurizio

From: roelof@...
Topic: 70 Message: 10934

Hello all,

Propagation is improving, but not for long I'm afraid.
At the moment K = 5 and the forecast is indicating a minor
geomagnetic storm.

NAVTEX 490 kHz log over 1000 km mini-whip:

```
20150919 1810 490 $03N IGS Piombino,ITA 1087

Hi Roelof,
It seems that during an event on the sun and shortly afterwards, propagation can improve.I have never received such long series of impeccable messages from Las Palmas and Sao Miguel.
Regards - Dirk

Hello all,
Propagation is improving, but not for long I'm afraid.At the moment K = 5 and the forecast is indicating a minor geomagnetic storm.

Topic: 70 Message: 10936

Hello Dirk,

It was the same here, but the reason could also be lack of or much reduced co-channel interferenece due to the solar event.

73,
Roelof

Radio gear in use is a Alinco DX-R8E and a AAA-1A loopkit from Cavdar @ 4m. One loop in 50° - 230° direction was used for the first three logs the others are heard by the 320° - 140° loop. Both loops are mounted in a vertical plane and @ 90° direction angle to each other. They are 1 meter in diameter.

Inside the top of this pole I also have mounted the Miniwhip @ 5 m, but was not in use today.

The Alinco is doing ok, above my expectations. It is supposed to be a budget desktop reciever, but it seems to be a bit of a outsider that is fairly unknown. The reception is made in USB-narrow mode wich seems to be 1.8 khz according to the spectrum window of Yand. My faithfull Drake R8e is defective and I hope to have it fixed again in a few weeks.

Hi all,

Average reception last night here with me I would say and then Sao Miguel suddenly appeared for a short moment. A nice surpirse.

73
Hans, D4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (285 <--> 105 degrees)
Soundcard : Behringer U-Phoria UM2

Hello Hans,

All Portuguese stations use a fairly unique identifier in their
messages, that may help to identify them.

CENCOMAR = 2R Penalva
CENCOMARMADEIRA = 2P Porto Santo,MDR
CENCOMARACORES = 2F Sao Miguel,AZR

Regards - Dirk

10953. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-09-23 08:30:34 UTC
From: dl4ybp@...
Topic: 7241 Message: 10953

Hi all,

Quite an intersting night. Odessa and the Canary Islands here for the first time this autumn. And Astrakhan again. Quite promising and astonishing so short after the sunspot maximum.

Thanks Roelof for checking my log and helping me with Sao Miguel.

73 and have a nice day
Hans, D4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (285 <--> 105 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments that no decoder can decipher)

Odessa off schedule?

10959. NAVTEX from Zealand, HOL

Yahoo group: navtexdx (2015)
Date: 2015-09-24 09:27:53 UTC
From: roelof@...
Topic: 70 Message: 10959

Hello all,

I found a lot of decodes from EAL, Las Palmas, CNR on 518 kHz.

T/A propagation is very poor at the moment. This morning I could find just one Canadian NDB (QY-263, Sydney, CAN) during a weak pre-sunrise enhancement around 05.10 UTC. The next timeslot for NAVTEX station VCO, Sydeney, CAN, is one hour later, when the propagation enhancement has long gone!

NAVTEX 490 kHz log over 1000 km mini-whip:

```

10960. Navtex log from Antwerp,BEL 20150924

Yahoo group: navtexdx (2015)
Date: 2015-09-24 13:15:30 UTC
From: Dirk Claessens
Topic: 10960 Message: 10960

Hi all,

Yes, we seem to be stuck in a sort of "halfway T/A" propagation.
Las Palmas could be logged in 2 time slots.
Cullercoats was late to start its transmissions, so Tarifa could make it.

Regards - Dirk

QTH : South of Antwerp, Belgium
Locators : 51.07.23N 04.28.03E [JO21je]
Receiver1 : Perseus SDR
Receiver2 : Lowe HF225
Antenna1 : pa0rdt Mini-Whip @ 5m.
Antenna2 : lz1aq/pa0rdt 1 mtr. wideband loop
Navtex-Decoder : YaND 6.5

Topic: 7241 Message: 10962

The only intersting thing I can report is the appearance of Haifa on 518 kHz at 18:29 UTC. Very early for me.

73

From: Dirk Claessens
Topic: 10964 Message: 10965

Hello David,

Niceholiday QTH there on Texel!

Your second Sydney message was wrongly identified as Svalbard by Yand.
The Q-identifier was received in error as A, and the NORWEGIAN keyword
was present.

Regards - Dirk

Hello David,

>>> 20150925 0246 518 $19A LGS Svalbard,SVB 2830 <<<

Looking at your raw log, it seems that the message is from VCO.
What do you think?

73,
Roelof

Hello David,

Further to this issue.
The message body contains the words <BOTTOM MOUNTED RED NORWEGIAN BOYS>. This is a well known message from VCO.

I gather that the faulty header <ZCZC AO> and the word <NORWEGIAN> caused YaND to flag it as Svalbard.

73,
Roelof Bakker

Roelof, Dirk

Think you are right boys..

Now back at home again after a few days on the island of Texel.

Calm environment and no interference at all...but conditions were not suprisingly good,unfortunately.

Now continuing at home with the KAZ in a NOISY Randstad, but in about three weeks again back to the island for Birding and DXing, hi

David Visser

Hello David,

Surprisingly, there was a good opening to northern Canada last night and I did receive the world's nothernmost NDB at 82N with good strength.

No NAVTEX yet in the area. I guess we have to wait till the ice goes away for good!

73,
Roelof Bakker

10977. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-09-26 12:43:50 UTC
From: david
Topic: 9398 Message: 10977

Hello All,

Back from a hot and steamy New Orleans to a cold and damp Scotland. But still very pleased to be back when I looked at the overnight log. Nothing from Canada, but there was still a lot of DX from Europe. Mostly, they were solid, clear decodes, too. Several infrequent visitors were there, and the reception period has lengthened considerably.

Logs over 1000km

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Sep 26, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances

10978. Report from VE3EAR

Yahoo group: navtexdx (2015)
Date: 2015-09-26 13:06:55 UTC
From: John Bruce McCreath
Topic: 6963 Message: 10978

A couple of nice decodes of Puerto Rico overnight shows DX is making
a comeback for me.

Report from : Bruce McCreath, VE3EAR
QTH : Saltford, ON, Canada
Locators : 43.74N 81.69W (EN93dr)
Receiver : TS-440S into DSP-59+ filter
Antenna : Delta loop 33M a side, apex up
Decoder : YaND V 6.3
Exclude : Less than 3,000 km
Best DX : $15K CBP, Puerto Montt, Chile
Web Site : www.hurontel.on.ca/~weazle

10980. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-09-27 08:07:15 UTC
From: dl4ybp@...
Topic: 7241 Message: 10980

Hi all,
Quite long logs. There were many more decodes from the Mediterranean on the ALA. I could not receive Sao Miguel on the mini whip. And Astrakhan was also much clearer on the ALA. Next time different results I guess.

73 and have a nice Sunday.
Hans, D4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4 + TrueTTY 2.95 in parallel

```

From: david
Topic: 9398 Message: 10982

Hello All,

Another excellent night for propagation. The 490kHz log would have been longer, but I seem to have disturbed the tuning of that VRX at around 1830z. I only noticed the error on my return from a music night at a local hostelry ;-(

Logs over 1000km

10987. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-09-28 10:58:37 UTC
From: david
Topic: 9398 Message: 10987

Hello All,

Another excellent night for propagation. The North-South path seems to be open for an extended time. I tried really hard to find transmissions from Canada on 518kHz, but the most likely signal was corrupted by $01W Valentia which is quite close. Perhaps another day.

Logs over 1000km

Topic: 7241 Message: 10991

Just a few logs that were unusual for me here.

73
Hans, D4YBP

Receiver : Rohde & Schwarz & EK 071
Antenna : PA0RDT's mini whip
Soundcard : Behringer U-Phoria UM2
Decoder : YaND 6.4

Unusually early here at my QTH.

20150928 1952 518 $01X TFA Grindavik,ISL 2186
20150928 1953 518 $01X TFA Grindavik,ISL 2186

20150928 1954 518 $01X TFA Grindavik,ISL 2186
20150928 2010 518 $19B LGP Bodo,NOR 1683
20150928 2231 518 $03P 4XO Haifa,ISR

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)

Also on 518 kHz. And I think there was a tiny fragment of Astrakhan before.

Topic: 9398 Message: 10993

Hello All,

Like Hans, I found a lot of early North-path decodes.
Multiple messages from nearly all stations that I have listed. Making sure which of the Norwegian stations was transmitting at any one time is far from easy. Sill nothing further West than Malin Head and Valentia.

Logs over 1000km

Hello David,

Your RNA log entry showed 1 first station.
Is this Svalbard?

Anyway congrats on catching it!

73,
Roelof

Hi Roelof & Vincent,

Roelof is right...
A + NORWEGIAN = Svalbard for Yand, but as Roelof pointed out the A belongs to Corsen and the NORWEGIAN to Bodo...

Regards - Dirk

11001. RE: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-09-29 22:44:29 UTC
From: david
Topic: 9398 Message: 11001

Hello Roelof,
Not 0007, but here is what I have.

YaND spotted the Svalbard reception at 2004. There were other signals mixed in, but I was convinced that it was right and that the initial lines were genuine.
At 0010, I received another transmission. I wasn't convinced it was Svalbard, and logged it as Bodo. Until you sent me to look at the two raw logs together, I hadn't noticed the similarities. Now I'm really unsure. One of them must be right, but I can't find an official web copy to check against. Any confirmation one way or the other would be really good to find.

These are the two sections of the log:-

Hello David,

Do you have the raw decode of your Svalbard reception at 00:07 UTC?

73,
Roelof

11002. Navtex from Lübbecke

Yahoo group: navtexdx (2015)

Hi all,

A night with interesting propagation towards the east.
Unusually many decodes from Varna but also Kerkyra.
Grindavik very early again. All logs frok 518 kHz.

From: david
Topic: 5417 Message: 11003

Hello Maurizio,

It is great to see logs from Italy. I see that you report signals from many of my local stations, but I wondered if you hear $01W Valentia ? I hear them at every session, but the station seems weaker than others at a similar range. As with all local stations, it is difficult to judge. You are in a better position to assess their strength. Does the signal reach you as often as Portpatrick and Malin Head? {Valentia usually does its longest transmissions at 0340.}

Best Wishes
David GM8XBZ

Hello David,

On 20:04:14 on September 28, I did receive from Corsen:

2015-09-28 20:04:14> ZCZC AA64
2015-09-28 20:04:17> 232004 UTC SEP 15
2015-09-28 20:04:19>
2015-09-28 20:04:22> AVURNAV BREST 445/15
2015-09-28 20:04:24>
2015-09-28 20:04:27> IROISE - OUESSANT

You did receive at exactly the same time this:

2015-09-28 20:04:14> Z~ZC AA~~~

Though not impossible, chances are slim that Svalbard did produce your received header. However, the rest of the message could be very well from Svalbard.

Needless to say that I did receive nothing from that as Corsen produced an immaculate decode at the time!

73,
Roelof

Topic: 9398 Message: 11006

Hello Roelof,

Well, I'm still a novice at this, and I rely very heavily on the experience of yourself and Dirk, amongst others, to guide me. It seems likely that the header came from Corsen. As for the remainder of the decode, I really don't know now. I was convinced when I went through my log, but there does seem an amount of doubt. I had hoped that I could compare the decode with an on-line copy, but have failed to find one, so far.

Best Wishes
David gm8xbz

Subject: Re: [navtexdx] Navtex Logs from W Scotland

Hello David,

On 20:04:14 on September 28, I did receive from Corsen:

2015-09-28 20:04:14> ZCZC AA64
2015-09-28 20:04:17> 232004 UTC SEP 15
2015-09-28 20:04:19>
2015-09-28 20:04:22> AVURNAV BREST 445/15
2015-09-28 20:04:24>
2015-09-28 20:04:27> IROISE - OUESSANT

You did receive at exactly the same time this:

2015-09-28 20:04:14> Z~ZC AA~~~

Though not impossible, chances are slim that Svalbard did produce your received header. However, the rest of the message could be very well from Svalbard.

Needless to say that I did receive nothing from that as Corsen produced an immaculate decode at the time!

73,
Roelof

Hello All,

It looks as if the good conditions are starting to fade. There are a lot more partial decodes, and the reception window seems to be getting shorter again. But it is still a lot better than August was, and the winter DX season gets closer every day ;-)

Hi David,

Apart from the Corsen-Svalbard header/message mix-up, there is another point specifically wrt the Norwegian stations: their time slot usage is remotely/centrally managed from Bodo. It appears that the 30 minute period occupied by Svalbard/Bodo/Vardo is managed as one big slot.
As a result, the starting times may considerably differ from the scheduled times.
Vardo is very frequently starting 4..5 minutes early in Bodo's time slot, so with fragmented/headerless messages it can be hard to tell which is which. See example below. There seems to be a 1 minute (safety?) time gap though.

Regards - Dirk

Hi all,

I got this picture of the Ostend 490/518 Navtex transmitters.
Actual location is Middelkerke, about 8 km SW of Ostend.
On the Google Earth screenshot below, one can see the antenna towers and the shadows they cast.

Regards - Dirk

Hello David,

here Valentia signal is not quite usual as Portpatrick and Malin Head;
I have logged it last time on 26/09/15.

Maurizio

11017. Navtex from Lübbecke

Yahoo group: navtexdx (2015)
Date: 2015-10-01 10:18:19 UTC
From: dl4ybp@...
Topic: 7241 Message: 11017

Hi all,

Quite interesting reception from the east and southeast. Nothing from the Atlantic.
Signals of the listed stations were weaker on the mini whip and YaND could not decode them.
The ALA proved stronger this time.

73
Hans, D4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (285 <--> 105 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)

From: david
Topic: 9398 Message: 11018

Hello All,

Signals continue to weaken, but there is still a 12-hour DX window to be grateful for.

The 2156z transmission from Limnos was on 490kHz, but was in English and had the header for their 518kHz service. Nice to know I'm not the only one who makes mistakes ;)

Logs over 1000km

From: roelof@...
Topic: 70 Message: 11022

Hello all,

I found three excellent decodes from Simiutaq/Cape Farewell, GRL, 3510 km on 518 kHz. This station is rare here as Jeloya, NOR, 990 km, is always dominating this time slot. I gather that Jeloya has been off and propagation from Cyprus, an other participant, was down.

NAVTEX 490 kHz log over 1000 km mini-whip:

```
20151001 1727 490 $03I ICH La Maddalena,ITA 1228

11024. Log Luebbecke

Yahoo group: navtexdx (2015)
Date: 2015-10-02 13:14:31 UTC
From: dl4ybp@...
Topic: 11024 Message: 11024

Hi all,

During a dull night Odessa appeared here for the first time this year. Well, a short fragment. It seemed to be off schedule.

And at 01:38:58 UTC Studio 1 crashed and reception stopped. Unknown USB device was the message. Whatever this means.

Congrats Roelof on Cape Farewell.

73
Hans, D4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments
that hardly any decoder can decipher)

All on 518 kHz.

```

11025. Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-02 14:25:57 UTC
From: david
Topic: 9398 Message: 11025

Hello All,

Being the first night of the month, I set out once again to record ALL of the stations received, regardless of distance, in the 24hr period.
I have only included 'regular' transmissions, i.e. ignoring out-of-slot Gale Warnings and the semi-random weather reports that UK Stations send. Mostly, this rule was straightforward. However the Norwegian chain -- cavalier in its use of time-slots on any day -- decided to transmit its data starting at 2010 with $19B Bodo as expected, and then followed on with $01L Rogoland at 2011 and $01N Orlandet at 2012. These were all Routine Messages. There was a pause until 2030 when $01M Jeloya popped up. Later, the stations came up with the same messages nearly in the correct slots, as usual.
I have simply reported them.

Conditions continue to get poorer. No sign of Cape Farewell here, so particularly well done to Roelof on the reception.

Session Report for David Atkins, GM8XBZ
Listening Location: Tighnabruaich, SCT, IO75jv (55°54'18"N, 005°14'07"W)
Report Created On Oct 01, 2015
Receiver(s): ELAD FDM - 2
Antenna(s): genuine PA0RDT MiniWhip at 7m
Software: Studio 1; YaND 6.4 - two instances
Report Sorted by Frequency and Time

Hello all,

Log over 1000km.
No sign of Simiutaq here, nice catch Roelof!

Regards - Dirk

11028. Re: [navtexdx] Log Luebbecke

Yahoo group: navtexdx (2015)
Date: 2015-10-02 18:19:54 UTC
From: Dirk Claessens
Topic: 11024 Message: 11028

Hello Hans,

Odessa may have been transmitting in its correct time slot.
REU (and Yand) list it as BCST @ 0230, 0630, 1030, 1430, 1830, 2230 UTC
as it used to be in the past.
But, about 3..4 years ago the IHO issued a "clean-up" request to all
stations (where applicable) to change their schedules to the correct time.
That is, A-stations should transmit in A-slots (00:00,04:00,08:00
etc..), B-stations in B-slots (00:10:04:10) and so on.

Odessa was one of the stations using the wrong time slot, and since you
logged it in the correct 20:20 slot, they may have changed their schedule.
(I remember that all USCG stations except Miami had to change their
schedules)

Regards - Dirk

11029. Re: [navtexdx] Navtex Logs from W Scotland

Yahoo group: navtexdx (2015)
Date: 2015-10-02 19:39:44 UTC
From: roelof@...
Topic: 9398 Message: 11029

Hello David,

>>> Conditions continue to get poorer. No sign of Cape Farewell here, so particularly well done to Roelof on the reception. <<<

Solar flux has risen over 40 points compared to a few weeks ago and there is also a minor geomagnetic storm going on. This very well explains the poorer conditions.

Vincent did receive Simiutaq-CapeFarewell also!
So they aimed at the Dutch this time!

73,
Roelof

Hi all,

I found some nice fragments of interesting receptions in TrueTTY's raw log and only on the ALA. Reception from the Snadinavians was much better on the mini whip again.

Thank you Dirk for your explanations.

73 and have nice weekend.
Hans, D4YBP

Receiver : Perseus and Studio 1 software
Antenna : ALA 1530 SSB+ (270 <--> 90 degrees)
Soundcard : Behringer U-Phoria UM2
Decoder : TrueTTY 2.95 (to dig its raw log for fragments that hardly any decoder can decipher)

From: david
Topic: 9398 Message: 11033

Hello All,

More static, and slightly poorer propagation. However, it was nice to see
the regular reappearance of $03Q Split after being undecodable for a period.

Logs over 1000km

11034. Navtex log from Antwerp,BEL 20151003

Yahoo group: navtexdx (2015)
Date: 2015-10-03 13:47:04 UTC
From: Dirk Claessens
Topic: 11034 Message: 11034

Hi all,

An extremely short log...
Logging suspiciously stopped at the time I checked everything before
going to bed last night :o(
Guess I inadvertently must have clicked on something...

Regards - Dirk

Dirk,
You have my sympathies. When I look at our electricity consumption, I start turning off monitors. But that really is a trip to the Dark Side. Twice recently, I have turned off a monitor and then clicked a mouse or keyboard without knowing what chaos I had caused until I switched the monitor back on again many hours later. At that point, I usually decide to simply leave the monitors on and pay up. Until the next bill comes in ;-)

You had a nice decode from Haifa, though. It is only after reading your Raw Log that I can make sense of what I received at that time. Mine was too garbled to decipher without help.

Best Wishes
David gm8xbz

Attachments: 1 described; binary payloads are missing from this source WARC

Hi David,

I may have found a likely candidate...
When a Perseus is already set to RTTY, and the RTTY button is clicked
again, it will switch to inverted RTTY,
indicated by a thin line above the text, and not so very clearly visible.
When unnoticed, this will of course ruin all further reception.

This setting is - luckily - not remembered by Perseus at the next startup.

Regards - Dirk
